Hello Jo Ann, I am awaiting a HQ consult on what my cleanup level will be for lead for the site. The AM is done, but will change if HQ lowers my cleanup level. The SOW and IGCE is complete, but it is also awaiting the cleanup number since it affects the volume of soil/T&D costs we will remove/dispose of. Hopefully, we should know by Monday, and I can submit the AM and then correct and forward you the SOW.

Nic - Jo Ann would like a copy of the current AM and she asked if you had started working on a SOW and IGCE for the Hope site. Please let her know either way. Thanks....jcp

Hope Iron and Metal, Hope, Arkansas: R6 participated in a HQ consultation to determine the appropriate cleanup level for Lead for the upcoming Hope Iron and Metal removal site. Currently the Action Memo is set for using the standard 400 mg/kg cleanup level for lead at the site per consult with ATSDR and R6 toxicologist. Due to a HQ memo on lead sites, a discussion occurred comparing a new proposed level of 200mg/kg for the site. Per request from HQ, R6 submitted an overview map with lead concentrations, and site data to HQ for review. R6 is awaiting the HQ consult to determine the appropriate cleanup level to use for the site. Once the consult is provided, the R6 Action memo will be put into concurrence. (Ronnie Crossland, x2721).
